SPECIAL CHRISTMAS OFFER FROM ROBTEK

TWO SUPERB UTILITIES IN ONE PACKAGE

NORMAL PRICE £69.90 FOR BOTH

**SPECIAL
PRICE**

£44.95

ATARI ST TOOLKIT

ROBTEK TOOLKIT consists of 6 utilities that use the GEM environment. They will help you in a very simple way to get more speed and power from your ST computer. Robtek's toolkit is not only designed for professional users but also to assist non programmers working with the Atari ST. Full instructions are given on the screen during each operation.

● **PRINTERPOOL:** This utility makes it possible to use your computer while you are printing. A section of the computer's memory is reserved for printing, and information is stored there. The information is transferred to the printer when needed without interrupting other operations of the computer.

● **RAM DISK:** This utility will speed up your file operations, saving you hours of time. Robtek's Ram Disk will reserve a portion of memory as a software image of a disk drive. Not only is this faster but also more reliable as there are no mechanical parts.

● **DISK COPY:** Is a utility that helps you make backups and format disks at a much easier and faster speed than normal.

● **DESKTOPUTILS:** Are a set of three programs that will help you to control and organise your disk directories. It is now very easy to keep an accurate library of all your disks.

● ENGLISH, GERMAN AND FRENCH MANUAL.

ATARI MACRO MANAGER

● **CALCULATOR:** Advanced 20-function calculator with 10 memories and loan analysis capability. Algebraic or RPN notation. Optional printing feature gives you a permanent record of calculations.

● **ALARM CLOCK/CALENDA:** View your appointments and be reminded of important times and events up to 100 years in the future.

● **VERSATILE WEEKLY PLANNER:** Includes exclusive Project Time Analysis Report Generator.

● **ELECTRONIC CARD FILE DATABASE:** Including search, print and phone out dial functions.

● **ALARM CYCLE:** Alarm can be set to trigger once, or at the same time every day, week, month, or year.

● ENGLISH, GERMAN, FRENCH MANUAL.

11 FEBRUARY 2007 • JOURNAL OF CLIMATE

Triple mode design

THE new Atari 7800 plays all Atari 2600 games without requiring an adapter, and its triple design allows it to support a wide range of peripherals.

The system memory has two 2M x 8 bit static ram chips and one 512 x 8 ROM.

Four chips are selected using three separate RAMCHIPS and RAMCLOCK being represented in the three graphic chips.

The machine has three distinct modes - standard and Matrix modes and 2600 compatibility mode.

The system automatically decides which mode to run in, depending on the cartridge plugged into the slot when power is turned on.

Up to six 7800 systems can play games from the common 764 chip, possibly linked in with the C64D option from the cartridge.

The video may come from either of four sources, TV or Monitor. When running in compatibility mode the 7800 system turns off the Matrix chips and all video outputs remain linear.

The system's connectors via the joystick port, Vertical resolution is planed in 320 by 192.

"The machine offers improved graphics and game play compared with the 2600 system, and competitive performance versus the ST line", says Atari.

"It doesn't require an adapter to play 2600 cartridges and it will be launched with a full line of software titles".

Show debut for games machine

An exciting new Atari games machine will be unveiled at the Atari Christmas Show in London.

The Royal Horticultural Hall, Westminster, has been chosen as the venue for the UK launch of the Atari 7800 - less than a month after its debut in America.

Atari describes the newcomer - which is expected to cost a price of £399.95 - as "a reaffirmation of our commitment to the games market".

The machine is intended to answer long-standing criticism that the company has been neglecting its loyal army of games enthusiasts in favour of its upmarket operators - in particular the ST series.

The new machine, which is due in the shops before Christmas, is expected to revolutionise Atari 8-bit software production.

"A large number of new games will be available by the time the 7800 arrives in the shops", an Atari spokeswoman promised.

Software houses are

developing for development kits and plenty of software will be coming in from 3rd party developers.

The 7800 will be the centrepiece of Atari's major presence at the Christmas Show which runs from Friday, November 28 to Sunday, December 30.

The company has promised that visitors will be able to enjoy hands-on experience of the new machine as well as getting a chance to see its supergraphics.

Bargains

"Atari has been accused of ignoring 8-bit users in favour of the 16-bit ST, but they have not been forgotten", says UK general manager Bob Gleeson told *STage*.

"We have new software for them and this will be on display at the show".

Altogether more than 100 stands will be loaded with new products and bargain buys from the leading Atari suppliers.

The special £30,000 as it stands hat will play host to big names like Software Express, Twinkler, GDS, Microdeal and Advanced Sys-

tems & Techniques as well as Atari itself.

This means the location is likely to see a repeat of the success at the first Atari Computer Show last March, which attracted 15,000 visitors.

Latest news of product launches at the show include Frogsy from The Moving Frog Company.

This back-up utility lets users make working copies of all their ST software, as well as formatting and copying disks, and costs £34.99.

Entisoft will be offering two co-accelerated graphics and sound packages for the ST - Pinapple Designer, price £399.95, and Pinwheel Designer at £49.95.

The firm is also launching Minicons, a new comme package offering access to both Freesat and Telecom Gold as well as supporting Spectrum and Gemini protocols. Price £29.95.

Entisoft single and double floppy drives for the ST will be available for £135 and £159. A 20MB hard disk and incorporating fully Qem co-accelerated software and diskette accessories costs £599.

NEW UK SALES CHIEF

ANOTHER former Commodore executive has joined the Atari UK management team.

Paul Welsh has been appointed UK sales manager, a position similar to the one he held at Commodore before leaving a year ago to become a

mail order software dealer.

Which fellow former Commodore colleague has gone? Gleeson is Alan Gleeson, now Atari UK general manager, was Commodore's UK general manager when Welsh joined the company in 1987 as national accounts manager.

The two men struck up a rapport at Commodore and it was Gleeson's recent move to Atari which tipped the scales away from two other prospective job offers Welsh was considering.

Interviewed by *STage*,

Welch revealed he had been offered the Atari sales boss position two years ago but had turned it down.

"Now that Bob Gleeson has joined Atari it's a different proposition", he said.

"We had a good working relationship at Commodore and I'm sure we can make things happen for Atari."

"We intend to make Atari the prominent brand in the UK games market once more, concentrating on ensuring our machines are fully supported by top quality products".

BUMPER TO BUMPER

CLASSIC pinball with a difference gets the arcade video treatment in Pinball Factory from Microline for the Amstrad ST.

In addition to the game of pinball, players can also design, build and edit their own screens.

They can create their ideal pinball machine, choosing from a multitude of bumpers, tabs and other devices and placing them wherever they like.

Then, using a graphic drawing system, walls and solid barriers can be added.

The playing board can be illustrated with pictures, arrows and other designs which the ball will pass over during play.

Any of the ST's 16 colours can be changed as desired using the built-in art program, and there is a choice of more than 800 different shades.

Designs can be saved and loaded to disk. Price, including sample ready-to-play screen, £19.95.

Easier payrolls

A PAYROLL package for the Amstrad ST has been released by Kyte-Datas.

Kyte-Datas is designed so that all PAYE, National Insurance and statutory sick pay information need only be updated once irrespective of the number of payrolls on the system.

Separate weekly and monthly payrolls for a number of companies can be held on the same disc.

Each payroll has its own files and password protection but all share system PAYE, NI and SSP parameters.

A variety of payment terms, periods and methods is possible. Employees can be entered as hourly paid and payments can be made weekly or monthly by cash, credit transfer or cheque.

Standard payments and deductions are held on file, and pay details can be entered manually or automatically. Price £19.95.

ON-LINE TO NORTH POLE

MESSAGES to Father Christmas need not depend on the efficiency of the postal service this year.

To ensure that every child receives him before the big day, the jolly old fellow has gone on line up at the North Pole.

Equipped with an Amstrad micro, Santa has hooked up his workshop to the globe. MicroLink

computer in the UK.

Now all the children – or their parents – have to do is contact him to receive their message via micro and modem.

SantaLink is the latest service being offered through the country's fastest growing electronic mail and messaging system.

All MicroLink subscribers

have to do is type SANTA at the prompt when they go on-line and then enter their message. The servers take care of the rest. And Father Christmas guarantees that every message sent to him will get through – and be answered personally – right up to Christmas Eve when the Elves deliver everyone's presents.

Package for pros

A MUSIC sampling system for the ST has been launched by Synthesis Music.

The ADSP (Analog to Digital, Audio Processor) SoundBank allows the user to store up to 64 multi-samples in memory for instant playback and incorporates real-time digital effects processing – delay, echo, reverb and envelope-

following. The package, which is aimed at music, video and broadcast professionals, is already used by top artists Chicago and the Pointer Sisters.

Price £3,495.

24 HOUR TURN ROUND

A NEW concept in electronic publishing from Lightning Graphics allows Amstrad ST users anywhere in the country to buy standard digital typesetting for as little as £5 per ST page.

It is intended for companies and individuals involved in graphic design, printing and publishing who cannot afford the cost of high quality traditional typesetting.

Access

Lightning offers training and a manual along with £100 worth of free typesetting and access to its electronic mail system.

Text is keyed in conventionally on the screen and instead of marking up the copy the user inserts special codes supplied in the manual.

These codes signify typical marking up functions such as type size, type face and line length.

Copy is sent via electronic

mail directly on to Lightning's Scotland typesetting system.

Data processed – 24 hours. The service is turn-round – because previous are sent back to the client by post or special delivery.

The user can make an "image" back-up, transferring logical sectors to counterpart floppies. Price £29.95.

All set to move up

ATARI believes it is poised to move into fourth spot in the UK micro sales chart.

Edged executives at the company's HQ are celebrating. Industry reports that Atari's UK software sales will soon surpass the Commodore 64 in the rankings.

"Latest figures show we are only a fraction behind fourth place right now", says spokesman Tony Ward of Atari.

"We're confident that the current trend will continue and we'll be challenging Amstrad for third place soon."

"The overall picture confirms the progress that Atari has made to regain its permanent position in the UK micro marketplace.

"Naturally we're all delighted to hear that independent industry research portrays us in such a favourable light".

Record release

A MANAGEMENT system for C programmers using the Atari ST has been released by Microbot.

Easy Record handles up to 16 indexed record files at one time, with eight key table in each record file and eight subfields in each key field.

Each key field has a maximum of 128 bytes.

The system allows record access through a variety of logical functions and has a functional library, random access storage facility.

Transacted processing allows related files to be kept consistent with start and end auto transaction functions.

Easy Record allows specification of key fields, duplicate key field values, creation of files from existing open files, and creation of files from definition files and blocks.

It also allows integer, unsigned, long, float, double, string and case independent string key data types, and C source code is included. Price £39.95.

Also from Microbot for the ST is Mighty Mail, a comprehensive mailman database with GEM pull down menus priced £29.95.

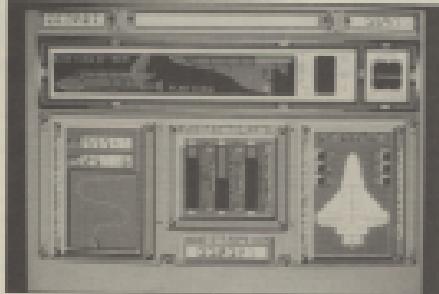

Movie music

SPECIALIST in computer software for the music industry, Steven's-based Steinberg Research has begun distribution operations from new premises in Oxfordshire.

It has also announced its first product for the Amstrad ST, an ST synchronising music in film and television studios.

Called the SMPTE - Gallery of Music Pictures and Television Engineers - generator, it will be totally interactive with the revised Pro-24 program - a multi-track recorder - and connect to the ST via the RS232C port.

The company claims this combination will set new standards in sequencing time code. The SMPTE generator itself will be available separately for about £1000.

Snapshot: the control panel

Christmas games roundup

A VERSION of the hit arcade game Gladiators has been released for the ST by U.S. Gold.

The game, which generated a lot of excitement when released in the original coin-operated slot format last year, offers multiple play capabilities as well as sophisticated graphics.

A choice of four characters is available with 150 levels of difficulty.

The object is to number waves of attacking monsters while searching for food, treasure and magic potions. Price £24.99.

Also new from U.S. Gold is the first in a series of Management simulations.

Show 'Em Up is the Amstrad ST version featuring four previously released titles — Super Zooland, Drapery, Big Mac 2001 and Pest Apocalypse. Cassette price £9.99.

plus with a 32-page novelty incorporating a 12-page playguide.

Jewels of Darkness is available on disc, price £19.95. Silver Drama is available for the ST on disc, price £19.95 and for the 8-bit series on disc or tape for £14.95.

★★★

FOUR new ST games have been released by Microbot.

Electronic Pool is a colourful video pool game featuring a high score table, realistic sound effects including cue-time music. Price £19.95.

Robot Party allows the user to customise his own robotic games and save them to disc. Incorporating graphics,

text action and sound it costs £34.95.

Shuttle is a graphic simulation of the NASA spacecraft. Featuring music from the film 2001: A Space Odyssey, the package costs £24.95.

Karate Kid II is the game of the year.

As Daniel Lafferty the player must battle against powerful adversaries, finally meeting the evil Chavez in the castle of King Shekhan where the secret of the drum must be discovered.

The program features full-colour animated screens and costs £34.95.

★★★

LATEST release from Densoft for the Amstrad 8-bit series is a version of its bestselling package Trivial Pursuit Genius Edition.

Offering all the facilities of the popular board game together with animated graphics, the program is available on disc at £19.95 and cassette at £14.95.

A Young Players Edition is also available for the ST and PC at the same prices.

★★★

AN adventure question time for users of Level 9 software is to be held in Reading on Saturday, December 13.

Owners of 8 and 16-bit machines are invited to attend the forum where Level 9 representatives will be offering adventure hints and tips and giving away free gifts.

The event will be held between 11am and 1pm at the Oxford Computer Store, Hanbury Arcade, off Friar Street in Reading.

CARTOON favourites from the popular Master of the Universe television shows will feature on new software for the Amstrad ST.

A licensing deal has been signed by Mattel and

U.S. Gold to bring out separate arcade and adventure versions of a game starring He-Man, Battle Cat and Teela in their fight against the evil Blotator.

An event NOT to be missed!

Atari Christmas Show

Royal Horticultural Hall
Westminster, London SW1

Friday November 28 10am-6pm

Saturday November 29 10am-6pm

Sunday November 30 10am-4pm

The first ever Atari Show last spring was an outstanding success. From all over Britain Atari enthusiasts flocked to London to find out all they could about their favourite machine.

Soon the record-breaking Atari Show will be back - with three days devoted to the exciting developments in this expanding market. Make a note in your diary NOW to make sure you don't miss this great Christmas extravaganza!

- All the latest software from publishers in both the UK and USA
- New hardware releases from Atari and other major companies
- Experts from *Atari User* and *Atari ST User* to answer your questions
- Experience the fascinating world of computer communications
- Everything on show from stocking fillers to complete Atari systems

Whether you're a new user or a seasoned addict, you'll find the show overflowing with ideas to help you expand your computing horizons!

This is YOUR chance to meet top people in the world of Atari. Among them will be experts from:

Good as new

Program: Star Raiders II
Price: £14.99 (plus p&p)
Supplier: Atari, 2nd ZED, 24
 The Avenue, Matlock
 Derbyshire DE4 2SD
 Tel: 01629 21111

STAR Raiders was introduced in 1982 when the Atari 800/1000 machines were launched, so Star Raiders II represents a landmark in Atari history.

Does it shape up, is it worth buying the new one and is it as good as the original?

The answer is yes, but don't buy it expecting a carbon copy game with better graphics as it's a modified version of the unreleased *The Last Starfighter*.

Sixteen years on and the Zylons are up in their old bases, this time with better weapons. They have improved their defences and have the capacity to introduce more ships into the fray.

To defeat them you will have to protect the cities of the

Cellos IV star system and destroy the attack bases of the Phoenix star system, where the Zylons build their new ships.

Each star system has a number of planets with cities or attack bases and to succeed you will have to move between and around the systems.

There is a nice graphic representation of the star systems, with planets, moons and stars, looking more like a game from a colour encyclopaedia than a computer game.

As is shown are space stations and Zylon squadrons in transit.

When you select a planet on the System Chart you're given a lot of information, including the number of cities or attack bases there, the type of terrain and the number of enemy ships surrounding it.

When you step there the planet is represented as a scrolling landscape before you.

Liberty (Star doesn't handle

too well) in combat. Give Liberator seems to turn at all and there is no left view.

You won't pull up or dive when engaging enemy ships and you can't adjust your speed in deep space.

The Zylon ships tend to persist in their course so there is no hunting in this game.

A different type of enemy ship appears when a predetermined number of player ships are destroyed.

Be careful - I have often hit a Fly Fighter, seen it crash fire, and then had it fly back at me in its death throes.

Docking is fully automated,

which is just as well as your ship has very small fuel tanks.

Refuelling and repairing take a large portion of your time but there is no penalty for losing a city or level at judgement time.

I heartily recommend this game, probably the best to have appeared since *Star Raiders*. The number of tasks involved mean that any fatalities are just about parity overcomes. Rob Anthony

Pitching it right

Program: Hardball
Price: £7.99 (Amiga only)
 AT £10.95 (all)
Supplier: Softline, 2nd ZED,
 Matlock, Derbyshire DE4 2SD
 Tel: 01629 21111

HARDBALL is the first simulation for the Amiga of the very popular American sport, baseball.

On loading, a series of choices are presented, covering two-player and computer versus player games. A menu-driven screen details team numbers and offers the opportunity to withdraw from or review them about the field. Action then passes to the main screen which is split into two sections.

The upper half shows the pitcher and the batter, with the

catcher and the umpire (who looks like an overgrown gorilla) behind the batter.

On the right is an inset diagram of the entire pitch on which the running-base players are seen.

The lower portion of the screen gives details of the scores and displays the batting and pitching choices in large red and blue boxes.

Each player chooses a batting or pitching method by using his joystick and pressing the fire button.

The pitcher then chooses where to place the pitched ball and the catcher will receive his glove to the relevant position.

The ball is pitched and the batter tries his best to hit it by choosing a direction with the joystick and entering the last by pressing the fire button.

If he misses the single will call Strike and, provided the batter has had less than three strikes against him, another pitch may be made. After three strikes a batter is out.

After three outs the whole team is out and the teams change over. The game ends when both teams have had nine turns.

Music plays throughout the

game, and although you can't turn it off, there are several different tunes.

Graphics are brilliant, especially the movement of the players. However it is very difficult to play at first, and takes several hours of practice to hit the ball regularly.

South Pacific

Program: *Scorching Wings*,
Price £7.99 (converted, £9.99
abroad).
Supplier: Red Axi, 18 Penn's
Street, Manchester M4
3DX.
Tel: 061-838 1000.

If you've ever fancied yourself as a pilot taking on hordes of enemy aircraft single-handed then this is your type of game.

Part of the arcade game 1942 will no doubt notice more than a passing similarity, although the enemy seems to have adopted different attack tactics.

You command a Lockheed Lightning Fighter, taking on the waves of Japanese fighters and bombers that come swooping in as you patrol the South Pacific.

You take off from your carrier in the midst of machine gun and tank again takes the heat - providing you survive.

Destroying certain planes gives you limited extra

Keeper or Destroyer Smart Bombs.

Your plane can also perform up to three loops to get out of those awkward little situations, but you do get an extra bonus for keeping them.

As these are operated by the computer you usually end up not being able to use them to any great advantage anyway.

The larger fighters take a bit more killing and the border patrols refuse to be shot down, which means using different strategies on different planes.

Fortunately all is not lost, for occasionally you are joined by another plane which acts as a shield for a while - who said difficulty was dead?

Joyous response is good although I felt the plane was a bit restricted as it is confined to the lower quarter of the screen.

The game is quite addictive, with a definite feeling of 'just one more go' whenever you

lose all your lives.

Graphically the game falls down a bit - the planes are rather uninspiring, especially your own.

The background is quite well designed and scrolling is very smooth, and the planes swoop and turn quite convincingly.

Some planes seem to have the ability to fly backwards (pretty clever, these Japanese), but this doesn't really detract from the game.

Sound effects are good but an unimaginative title prints across the background. However, you don't like

turn off but leave the sound effects on.

Overall Scorching Wings is a fairly average shoot-'em-up.

It'll keep you occupied for a few hours but the lack of variety in later screens and having only one level means unless you have played it a few times like appeal fades.

At the price it's worth trying it out before parting with your money.

Humble servant

Program: *The Slave*,
Price £19.99 (converted,
£24.99 abroad).
Supplier: Zzap!64, 2477 Tiverton
Road, Dartford, Kent DA1 4UD.
Email: [compuserve.com](mailto:zzap@compuserve.com)

The Slave is a suite of programs which allows you to write an adventure of up to 120k, which will then read an open side of a disk.

First you should map out your adventure on paper, ensuring it is as close as possible to how you want it to turn out - leading and correcting your adventure is not the easiest thing to do.

You can now define your location descriptions (which can be up to a full page of text), messages, objects, and verbs/nouns - up to 255 of each.

An excellent feature, however, is available to provide a more detailed description of an object if necessary.

Each verb or noun can have several synonyms, thereby increasing the vocabulary.

The Editor allows up to 12 exits to be defined for each location.

If you have ever written or attempted to write an adventure, you will know of the usefulness of flags. Well, *The Slave* is equal to the task with the ubiquitous SS.

Some are pre-defined, for example the number of objects carried.

Now comes the hard work!

To write your adventure, a player will require action-synonyms for the commands the writer. To write the logic for these responses you are given GAI, *The Slave* Adventure Language.

GAI is a language close to a powerful Basic. It has 73 main commands but these can be combined to give over 244 variations, some of which

enable you to introduce sound, music and colour changes into your masterpiece.

After you have produced all the necessary files, you are shown how to bring them all together to form the finished adventure.

The Slave also includes a graphics program and a facility to design a simple title page using Graphics-Enhanced.

The 138 page manual, although well written and at times amusing, is considerably

difficult to understand but careful re-reading will eventually clarify any points of doubt.

All in all *The Slave* is excellent value, and a must for any budding adventure writer.

Classic mould

Program: Starquake
Faller: CB IPS (importer)
£12.99 (boxed)
Supplier: Bubble Box, 87 High Street, Romford, Essex RM9 1RR.
Tel: 0170 560097.

COULD you admit it? There must have been a time or two when you've cast an envious glance at those arcade adventures from Ultima for the Spectrum and wished they were available for your Amstrad.

No jabs no more. Bubble Box has produced Starquake, an original program but one that is as graphically very much in the mould of those earlier Ultima classics.

You control Blob, an amiable little dumpling who must rescue the crew of an alien planet and avenge various items.

The planet's core has gone critical - Blob's job is to find it, fit it with the right objects and thus stabilise it. At the wonders of modern technology!

Blob is delightfully animated, scurrying this way and that along terra firma as he explores the caverns.

Being subject to the normal rules of gravity, when he bounces off the edge of a precipice he falls until he meets the ground again. No damage is done unless he strikes something nasty on the way down.

His fleshball can be slowed by putting back on the joystick. This causes a small platform to appear under him and stop him dead.

This facility can also be used on the ground - fire and negotiate pulling back on the joystick creates a ladder of these floating platforms which can be used for getting at otherwise inaccessible places.

Blob can also get airborne by gliding on what looks like a white breeze-block. Once on it, he can fly merrily around the caverns.

Another fast way of travelling is by using one of the

transporter booths. To activate, you must guide Blob into a booth, type in the code of any of the other booths and bingo - he's there.

There are hundreds of different caves, each one a separate screen. Outside off the edge of the screen and another place up.

The caves are filled with alien vegetation, machinery and nastily animated flying blobs.

Damage is lost each time Blob is touched by an alien but he can zap them, and he loses a life if he bounces into such fatal items as sparkling machinery or a naked part.

Blob has 8 lives and a limited amount of energy, zap and platform building power.

Everything about Starquake impresses, from the title screen to the high-score table, from the use of colour and sound to responsiveness and playability.

Bubble Box has produced a superb game. Starquake is top notch fare, quality shooting from every angle.

Modest tasks

Program: Quest for Empire
Price: £2.99
Supplier: Big-Byte, Liberty House, 222 Regent Street, London W1P 7JZ.
Tel: 01-409 0596.

HAVING done something unusual today, like becoming an overlord of the universe? That's the modest task this adventure sets you.

To achieve your ambition all you have to do is get an out-of-order teleport booth back in working order.

The snag is that this booth is situated on a somewhat hostile planet over 2000 light years away.

The start consists of the starship Nebula which is itself out of action - does ramming work in this part of the galaxy? (Hitting our boat to get the ship going is your prime task.)

On the flight deck there's a control panel, terminal and weapons but try as you

might, there doesn't seem any point of bringing them to life.

Up by this main drive unit the deflector's traction level seems pretty low - perhaps that's something to switch off.

A large crate in the hold possibly holds a clue but how do you get it open?

You could always try breaking the staples via the attack but that results in suffocation through lack of air.

Wiping a discounted space suit doesn't help either - its alright to pass. This opening sequence should give you plenty to think about.

The display is fairly conventional. Your location, possible exits and visible items are described in the top half of the screen while input and responses appear in the lower half.

There is no scrolling - the screen clears each time you execute an action that carries a positive result.

The game's vocabulary

consists of 26 verbs and 182 nouns, commands being of the usual multi-word format.

If a command is not recognised by the program, it helpfully tells you whether it is the verb or the noun that is not understood.

The descriptions are fairly detailed and there are over 70 locations to explore.

The text is concise, the game well organised and,

despite the program being written in Basic, response time is fast.

Quest for Empire is an enjoyable if unoriginal adventure. At the price, well worth buying.

Four channel model controller

Part 7 of LEN GOLDING's series on using your Atari to control devices

If you've ever wanted to link your Atari to Legos and Meccano kits, slot-car racers, miniature railways or computer-driven buggies, this model controller is for you. It can even handle your Christmas Tree lights!

The controller provides independent on/off switching for up to four motors, relays, solenoids or other low-voltage devices. It can also operate as a four-channel speed controller, or as a two-channel reversing switch so you can make a buggy move forwards, backwards, left or right at different speeds under

full software control.

Each channel can drive a dozen torch bulbs for children's disco displays - including cheer lights - and there are even some limited applications in robotics.

Figure 1 gives the circuit in schematic form. Each of the four outputs is driven by a two-transistor power switch which enables the flow currents and voltages from the joystick port to control currents of up to 5 amps and voltages of up to 34V at the outputs.

We explained transistor switching action back in the second article of

this series (*Atari User*, July 1989).

Figure 2 shows the printed circuit board pattern for those of you who want to etch your own but, as usual, a commercially made PCB is available from RIM Design.

The component layout is shown in Figure 3 and construction is very straightforward so that anyone can attempt it. Start by soldering the resistors and diodes, making sure the diodes are connected with their silver bands to the top. Then fit the BC108 transistors and all connecting blocks.

Bend the leads of each TIP127 transistor at right angles and solder

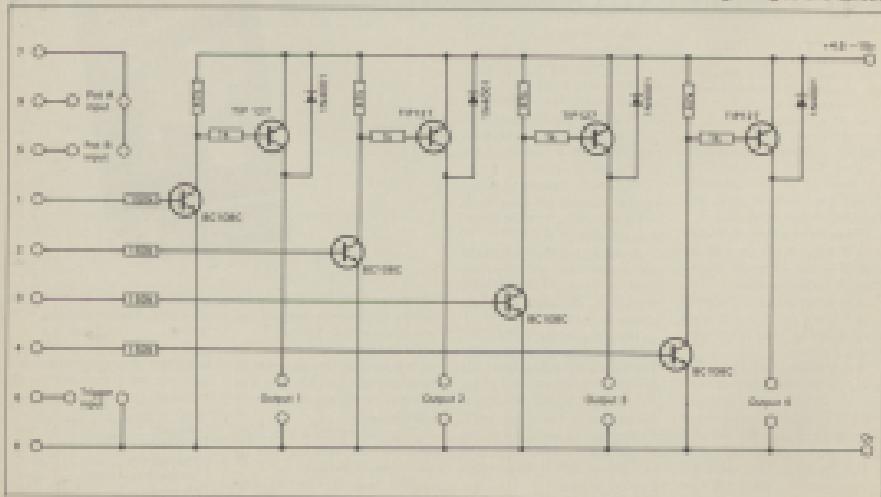

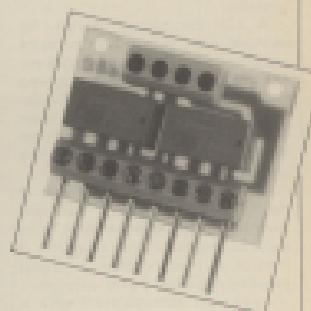

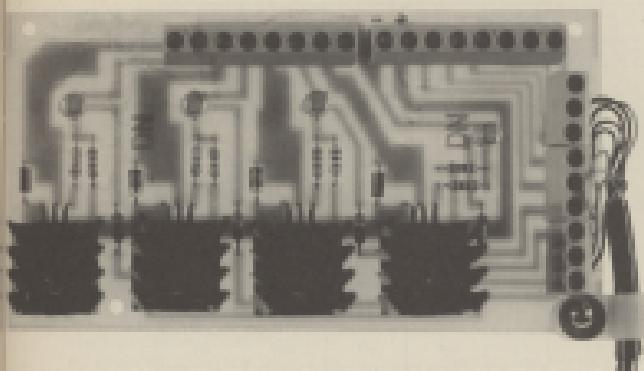

Figure 1: Circuit diagram for main board

there slightly to fit the PCB holes. Smear a small amount of silicon grease on the back of each transistor then bolt the four transistors and heat-sink assemblies into place before soldering the leads.

Make sure that the heat-sink bases cannot touch each other or the gadget will not work properly.

Cut the joystick cable to length, disconnecting the socket end, then wire each of the nine leads to its appropriate point on terminal block 1, as indicated in Figure 3(i). Use a P clip to secure the joystick cable and take one sleeve.

Motors require far more current than a joystick port can provide, so the next thing you need is some kind of low-voltage DC power supply. This design allows a very wide latitude – anything from 4.5V to 24V is acceptable.

At high output currents the voltage delivered to your load may be almost 1V less than the full supply voltage.

A properly stabilised mains power supply unit is best, but these are expensive and not really necessary for things like motors, solenoids, relays, lamps and other non-electronic devices. Battery eliminators intended for transistor radios or cameras give good results, but the cheap ones cannot usually supply currents above 1 amp.

DC power packs designed for model railways, slot cars and construction sets will work quite well and even a car battery charger should give acceptable results, though the output

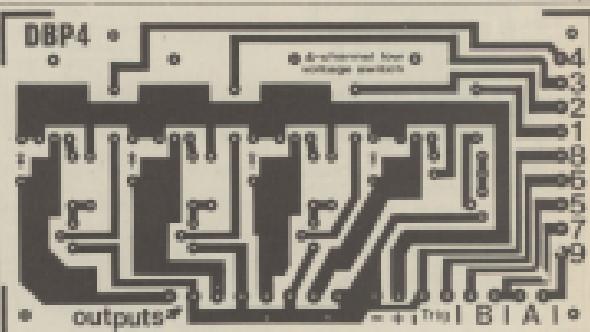

Figure 3(i): PCB for outputs section (cont'd)

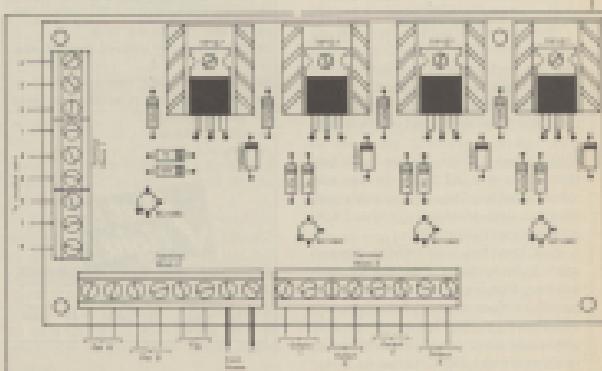

Figure 3(ii): Component layout on inverse side of PCB

From all these devotions tends to be
asceticism.

A 12V car battery charger, for example, may deliver 18V or more under no-load or light load conditions, failing to 12V or less when supplying severalamps. These voltage fluctuations will affect the speed of most motorised reactions, so you may find things need to slow down as more of a battery is exhausted.

If you plan to run any other types of device — especially if you are considering running electronic units such as radios or tape recorders — there is better no trick to using correctly insulated power lines.

properly regulated power sources.

Whatever type of power supply you choose, its output must be wired to terminal block 2 as shown in Figure II. Take great care not to reverse the positive and negative leads or you could damage the transmitter.

Each output translator can easily handle 1 amp continuously and up to 5 amps for periods of a few seconds. If you plan to draw steady currents above 1-5 amps you will need to use larger power blocks.

Programming the device follows the familiar pattern. Start by setting up the joystick ports for output (line 1 of Program 6), then POKE a number from 0 to 15 into address \$401B to switch on your chosen combination of channels. Table 1 shows all the possibilities.

Program 1 is a simple demo which switches on each channel in turn, as if you stepped a ring of four torch bulbs you will see a chasing effect.

An attractive animated display can be made from an old set of Christmas tree lights. Assuming your set of lights takes 12V bulbs, you will find that there are 20 bulbs in the set, wired in series. This means each bulb receives one twentieth of the 240V mains supply - or 12V.

Cut the box half-way between each bulb, snip the tails to each holder and re-wire the bulbs in parallel. You could wire different coloured bulbs to each of the channels, and have an attractive multi-coloured light sequencer for Christmas.

There is no reason of course why

卷之三

卷之三

You shouldn't exceed the wires with
so many decorations. You can run your
Christmas tree lights from your attic
this year! Just remember to keep the
balls in contact with each other.

If you're using motors you can introduce an element of speed control by switching the power on and off in rapid pulses. Program II shows the conventional way of doing this, using a variable switch function routine.

A short burst of power (like revs) is applied. Followed by a short off period (like the space). By choosing appropriate values for Δt_{M1} and Δt_{M2} you can visually notice a motor's speed by as much as eight steps before its

Try, for example, setting **DATA** = 1 and **SPACE** = 2. Program II operates with channel 1, but you could apply the same principle to any of the other channels.

Some applications - such as buggies and robot arms - need a controller which can change a motor's direction of movement. Most model motors can be reversed simply by changing the polarity of their supply leads, and Figure 10 shows

begin to do this with Double Plus, Double Three - or DPT - virus.

Each relay is rated from two channels - one for the on/off function and the other to select forward or reverse. Any DPDT relay will work provided the coil and contact ratings suit your application.

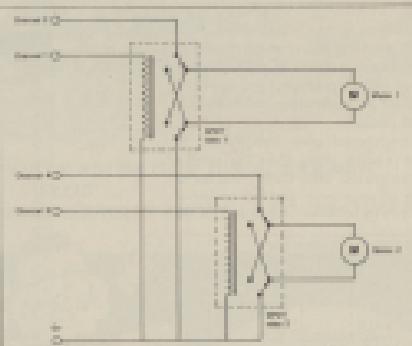

An add-on PCB (D9PFS) is available for use with two of Maxim's ultra-minimales relays, which can each handle 2 amp at up to 24V. Choose the coil voltage which best suits your power supply - 5V types will operate on 4.5V to 7.5V, while 12V types work on 9V to 12V.

The foil pattern and layout for this PCB are shown in Figures V-5 and V-6. The 16-way terminal block is connected pin-for-pin to terminal block 3 as the main board, using flexible wires or rigid pins cut from 2.5 x mm ribbon cable. Table II gives the numbers to PCP into S4018 for the various subset operations in this mode.

You might like to consider building a Logo-model tank with a separate motor for each track, or a model car with some kind of servo to operate the steering. You could fit coils over moving coils and still have two

| Number in 5x516 | Left Motor | Right Motor |

on/off channels available – by control a model train and two signal lamps for example.

External sensors can be connected to the main board at terminal block 2, as shown in Figure III. Joining the two pins marked "big" will cause the number in address 644 to change from 1 to 0. Try writing a program to operate when your buggy hits an obstacle, or when a robot hand closes.

The other two inputs (Port A and Port B) each measure the amount of

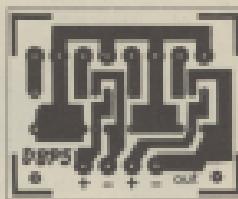

Figure 11. PCA first principal component

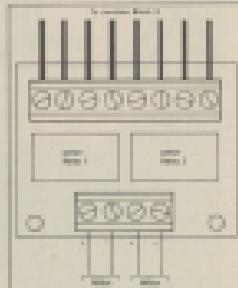

Figure 10. Comparison Model and Results of various methods [2].

electrical resistance between their two contacts, and store the result at address 824 loc 41 or 825 loc 41.

A 410Ω variable resistor placed across one of these lines will return a number from 1 to just over 300 and this could be used to measure the degree of rotation in a servo shaft, or the angle measured in a robot arm.

Alternatively you could fit a carbon sulphide cell, whose resistance varies according to the level of

Gadgets

Illumination — See Alan Dyer, June 1980. Arrange for your train or slot car to break a beam of light when it passes a given point and you have the basis for an accurate position sensor or lap counter.

That should give you plenty to think about over the Christmas holiday period. Why not try out some ideas of your own and let us know how you get on? ■

ATTENTION ALL 1050 DISK DRIVE OWNERS!!

Announcing the all new ULTIMATE drive enhancement.

This Drive enhancement consists of a plug-in PCB, which can easily be fitted with our simple to follow instructions.

The 1050 IS PLATE Disk Drive enhancement offers many features never before available in one UNIT:

- Improved Drive speeds - up to FIVE times normal loading speeds (Depending on disk format used).
- Reduction of Drive WAIT and READ times whole tracks can be stored in the Internal 16k RAM.
- The 5.25" PLATE can READ/WRITE in whole blocks in the time it takes a standard 1050 drive to READ/WRITE a single sector (up to FIVE times enhanced speed).
- Supports double, Dual and Single Density.
- Sector寻址 no longer required to obtain Highspeed with US Doubles.
- Other Special Features are: Slow down, Fast write, Prod speed, Drive write lock, Slave on/off, Fast mounting.
- Fast writing with verify. This system is faster than other systems which write without verify.
- A double sided operating system disk is supplied which offers the following:

 - US Doubles, US Doubles Standard 1050 and Archiver emulation.
 - Track Tracer, Diagnostic tester, 48k and 128k Disk Backup utilities.
 - The PLATE can be made invisible to software detection by either slow down or 1050 emulation.
 - Supplied with detailed information regarding software drive control to allow you to unlock the full potential of the PLATE.
 - Will run all available disk operating systems (DOS) including Speculator, Hobby warp speed DOS, and other HIGH speed systems.
 - With this system, up to sixteen drives can be connected and used.
 - A comprehensive 30 page bound manual is supplied. This includes fitting instructions.
 - All registered owners will be supplied with one software update etc for the price of Disk and return postage.
 - All this is available for £299.95 inc post/packing and twelve months guarantee.
 - Whilst every effort is made to ship the product by return, please allow 21 days for delivery.

Now available exclusively for the Ultimate Drive Enhancement.

THE ISP GREMLIN GRABBER

The comprehensive 15 track back-up utility disk, complete with manual.
Price: £14.95 inc P&P

53 Rugby Road, West Worthing,
Sussex BN1 1 SAB

WHEN you wake up early on Christmas morning and reach out to shag the shadow by turning on your trusty brass lantern, what adventure will you hope to find snuffed in your battered leather knapsack at the foot of your pile of straw?

Perhaps you've already made up your mind. If not, get out a piece of your best parchment, with your quill, write the words Jewels of Darkness on it, address it to Santa's/o the North Pole and shove it straight up the chimney.

Who shouted that there's no such person as Santa Claus? How dare you call yourself an adventurer!

Published by Rainbird, and available for both the ST and 8-bit Atari computers, Jewels of Darkness is a collection of three superb early adventures from Level 9.

The trilogy comprises Colossal Adventure, Adventure Quest and Dungeon Adventure. All have been comprehensively updated to include graphics - no less than 600 coloured illustrations - a 1,000 word vocabulary, multi-command input, multi-tasking three sheet regardless of what's happening on the screen, and incredibly fast response times.

Even without all that technological wizardry these adventures would easily be among the best around. Colossal Cave is an all-time classic and this version is rated by many, including my humble self, as the finest ever. No self-respecting adventurer worthy of the name should be without it.

And just what king a ronin does this regal collection cost? I hear you ask in trepidation? I betta never tell off his perch and almost died laughing when I told him, so brace yourself for a shock.

For the 8-bit Atari you get this Imperial trilogy on three separate cassette, or one disc, handsomely boxed, complete with a 64-page novella, for the incredibly low price of

Bargain of the year

By Brillig

friends or yourself, I've listed my 20 favourites.

Party of Infocom titles there, but they happen to be the crown prince in my book. I know of no better reason for owning a disc drive than being able to own a few Infocom adventures.

Now to this month's hints and tips. Nigel Moore from Doncaster wants to know how to deal with the snowman and the dragon in Rainbird's The Pawn. Nigel's difficulties with the snowmen are dealt with in Hints 'N' Tips, but can anyone tell me how to get Nigel past the dragon?

Deejays have also stamped Eric Nolan of Dublin. These creatures seem to cause adventurers more problems than anything else. Eric needs help with those in Enchanter and Feasibility Experiment. In the latter, he'd also like to know how to light his lamp.

Eric has another problem - can anybody tell him where he can find the drum for the soldier ants in Return To Earth?

Next issue I'll be back with more hints and tips to aid you in your struggles, together with the start of a reader's Lifeline corner. If you'd like to be listed in Lifeline write in with your name, address and which adventures you can help others with.

Until then, I wish you a joyful Christmas and an adventurous New Year.

HINTS 'N' TIPS

ENCHANTER - Infocom
To deal with the dragon.
LAMP **SAID** **NOGE** **HTEU**

FEASIBILITY EXPERIMENT - Digital Fervours
To overcome this dragon's fiery breath,
FLES **DLEI** **RSOD** **ANOP** **ADWE** **ZU**
To fit the lamp.
KHOF **AHDN** **LUOD** **EDNU** **OV**

THE PAWN - Rainbird
Snowman a better?
STOM **WEKA** **MOTCE** **ULED** **MAMF** **CRGD** **EHO** **AT**
Then simply:
TINT **SWWA** **EWWD** **STL** **Ar**

ZORK **I**
Is the trial bringing you to grief in combat?
WORALEWTS **EBCH** **TSX** **PWIC** **YTRM** **ADWT**
LUAU **CYME** **SNDR** **TSRH** **REVA** **RUUD** **SVA** **DABR** **DARH** **T**
ELBA **LUAY** **SHAH** **TERMO** **SMHU** **GWYV** **ISGB** **NHT** **CART** **SVD**

IT really doesn't seem twelve months since you were sitting round the dinner table tucking into that enormous Christmas turkey does it? But, 'tis the season to be jolly, and for many of our readers that means getting out all the old favourites - games which haven't seen the light of day since last Christmas. If you remember, the twice-thatched granny at Missile Command and Uncle Tom spent most of the afternoon trying to get his hog across the road...

For seasoned veterans the Atari will naturally be a star performer at Christmas but spare a thought for the newcomers who took advantage of the marvellous Double and Centipede packs during 1986. They have probably never seen Frogger, much less the other classics.

The problem is that alongside these masterpieces there was, sadly, a lot of rather tightly priced rubbish. So, if you're among that vast majority of Atari owners who don't remember the excitement of buying an original 1981 Atari 800 for the bargain price of £645, read on and get a few ideas for this Christmas.

There can really only be one place to start when talking about all-time classic Atari games - and that is with Star Raiders. Released on an 8K cartridge at £34.95 (now available at under a pound), this game was a revelation in the computer games industry. Indeed, I know a good few

people who actually lashed out their £645 just to play this game and it still holds up well today.

Star Raiders is a space combat simulation with a through-the-windows style display. The aim is to defend your Starbases from attack by the evil Zylon empire.

To do this you hyperspace your spaceship around the galaxy to areas which your long range tracking system shows have a high Zylon Sent

Classics for Christmas

ANDRÉ WILLEY looks at the very best games, old and new, for Atari users

concentration. When you drop out of hyperspace your short range trackers kick back into life and with the red alert blaring in your ears you engage the shields and the attack computer and commence battle.

As your on-board systems sustain damage and you run desperately low on fuel, you must choose your moment to warp out and dock with a friendly starbase for repairs.

Star Raiders is extremely addictive and a must for all serious game enthusiasts.

Staying with the space theme for a while, there can be few who have not seen the arcade machine Defender and the Atari cartridge is one of the closest representations available. You have all the excitement and speed of the original, blasting aliens like there is no tomorrow as you rescue people from the clutches of the evil galactic baddies.

If you liked Defender then you'll love Dragoon. This was released a little more recently but very quickly gained the classic label. The theme is the same as Defender but this time you play a space man with a jet pack and a laser gun.

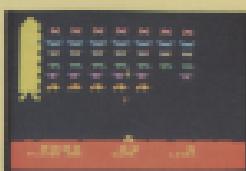

No games overview would be complete without a mention of Space Invaders, and there have been a whole host of variations on this arcade standard. The closest to the original machine is probably Do-Less Invaders from Ryker, but

Atari's own Space Invaders cartridge is pretty good too.

The Galaxians cartridge has its merits in terms of fast moving aliens, but the cream of the lot must be Mandala from Status software. I last saw this priced at £21.99, but it was worth every penny.

Each wave of aliens is different. Firstly a bunch of swooping and diving craft which are quite easy to knock off, then craft that fly off into the distance every so often.

These are followed by others made of coloured spheres which will teleport and bounce all over the place if you shoot them down. The next wave features centipede-like

aliens which snake their way towards you at an alarming pace.

As you progress through the levels these different types of alien gang up to try to eliminate you. Accompanied by some of the most original - not to say downright rude - sound effects I've heard for years, this game is one of my all-time favourites.

One of the strangest computer games I've come across - and I highly recommend it - is *Desert*. You play a space-age knight in shining armor, astride not a horse but a giant flapping bird.

The controls are simple - left/right and press the button to flap (gravity brings you down again, often with a bang). Combat is straightforward but, especially as a two player game in which both sides play on the same screen, it is hard to beat for sheer enjoyment.

Moving on from the space attack games, there are a number of family

games. The most obvious of these is *Pac-Man* - which I don't really think needs any further explanation other than to say that it is one of the best versions available on any micro, even today.

Frogger is another arcade classic which has made a successful move to the Atari home computer - complete with cars, logs, turtles and even Mrs Frog. This one still has great appeal.

Another *Frogger*-like game is *Prapple* - which features a little fellow who must cross the road and river in order to collect golf-balls which have gone out of bounds. Again, this has lasting interest and home pleasant music.

If you want a bit more of a challenge, look no further than *Miner 2049er*. This is probably top of my own personal list of favourite arcade games, simply because there is so much to it.

You play *Bounty Bob*, a gold prospector who is trying to find his way through the radioactive mines. Along the way there are radioactive creatures who will eat contact, but which you can dispose after picking up certain objects - rather like *Pac-Man's* power-pills.

The real appeal of *Miner* is that to complete each level you must leave your footprints on every bit of floor you can see - and that often involves

a lot of leaping about, not to mention using the teleporter lifts and falling down slippery slides at just the wrong moment.

There are 10 completely different screens and as many difficulty levels of each screen - making screen 10/level 10 an almost impossible task. This game is a must for all game-a-holics, and no collection is complete without it - or its sequel *Bounty Bob Strike Back*. Still on the levels and ladders theme, you should also look out for *Bonfire King*, *Lode Runner* and *PopArt*, all of which will hold up very well today and provide hours of fun.

If you wish to add a combat element to this idea you could try *Battle Axe*, in which you take the part of our hero in trying to defeat the bad guys and exploding a temple at the same time.

The simulation enthusiasts have not been forgotten in the Atari games field, with the excellent *Pole Position* car racing game still holding well, even if it has been a little out-classed recently by *ElectroGolf*.

Flight Simulator II and *Mercenary* both boast excellent 3D in-flight graphics, with *Mercenary* having the added bonus of the space theme and lots of exploring and bargaining to do.

Sports fans can try their hand at *Summer Games*, which is a real athletics marathon and can be very competitive when played in a foursome. *Decathlon* is good too, but I think that *Summer Games* just takes the edge.

Martial arts fans who were not satisfied with Bruce Lee should take a look at *International Karate*. Although only released recently this will quickly become a classic and should feature in any serious games player's collection. It allows you to take your karate more seriously, with various kicks, punches and moves available to you, plus full scoring and match play rules.

That collection should see you through December 25th. However, when Boxing Day comes around and the relatives have all gone home, how about sitting down with something a bit more brain taxing - and what better choice than an *Infocom* adventure?

Adventures are not everyone's cup of tea, but if you want one that will appeal to almost anybody, give the

Highlander's Guide to the Galaxy a try. You may be stuck on it till next Christmas, but whatever else you do you'll keep on coming back to it for one more try.

The characters are well rounded, the puzzles intriguing and infuriating and the situations really vary, it took me absolutely ages to get through the screening door on the Heart of Gold spaceship, but that feeling of euphoria as it finally slid open deserved any amount of alien-bashing.

In this brief survey I haven't really been able to scratch the surface of the enormous number of games available for the 8-bit Atari. For example it would be well worth your taking a look at such all-time hits as *Caverns of Mars*, *Sea Dragon*, *Encounter* and *Missile Command*.

Hopefully I have been able to give some of the newer owners a few ideas for Christmas and reminded the old hands to dust off the cartridge box, get out the space joysticks and have a very Merry Atari User Christmas.

The titles mentioned are available from the following suppliers:
Atari Computer, *Caravan*,
Microstar, *Star Systems*, *Defender*,
South Westware, *Galaxy*,
Acclaim and *Double Kang*.

Frogger - *Sierra On-Line*,
Orbital Interactive - *Holiday*,
Sea Dragon, *Encounter*, *PopArt*,
Bounty Bob Strike Back -
Americana.

Bruce Lee, *Pole Position*, *Lode Runner*, *Summer Games* -
U.S. Gold.

Summer Games - *Sierra Software*,
Miner 2049er - *Sierra Software*,
PopArt - *Parker Brothers*,
ElectroGolf - *English Software*,
Flight Simulator II - *Sub Logic*,
Corp.

Mercenary and *Encounter* -
Novagen.

Decathlon - *Activision*,
International Karate - *Systems*,
Activision.

Highlander's Guide to the Galaxy -
Infocom.

*Indicates no longer easily
available, but with a little
hunting about, readers could
probably find some old stock.

SANTA'S GROTTO

Have some festive fun with
MIKE ROWE's latest game

IT'S Christmas Eve and all over the country stockings are being hung and chimneys swept in preparation for the following morning. All is happy and cheerful and the world is at peace.

But wait... at the North Pole all is not as well - poor Santa is in a panic. He's polished Rudolph's nose, checked the oil level and tyre pressure, got his AA route map ready and is about to depart when he finds the boot of his sleigh is empty. Those mischievous little elves have pinched all the presents and hidden them!

Only six hours to go to Christmas Day and the presents are scattered throughout the catacombs of Santa's Grotto. Your job is to guide Santa around the catacombs, collecting as many presents as possible before the time is up.

To make things worse, the elves have hidden present sacks in rooms where you will have to solve a puzzle to get at them. Each sack contains 10 presents so it's worth going for them, but remember that you cannot waste too much time in these rooms as Santa doesn't want to linger.

Luckily Santa has a map of the catacombs, but unfortunately it's difficult to fit and he can only see one small section at a time. So go to it - think of all the unhappy children tomorrow if you fail - not to mention the fact that your present might be in there somewhere!

Santa's Grotto is a one player game where the object is to run around the 100 screen maze collecting as many presents as possible. Each time you play a completely new maze will be created. You control Santa with a joystick in port one and to collect a present all you have to do is touch it. The time limit is displayed at the bottom of the screen.

Not all presents are necessarily obtainable but you must get as many as you can before midnight. And there are 10 magic inventions which will transport you to one of the elves' secret lairs. Here you will find a sack containing 10 presents, but to get it you must solve a little puzzle.

At the end of the game the number of presents you have collected will be displayed and a rating of your performance will be given.

The program is commented with notes to give some idea of what's going on, although to save on space these can be omitted without affecting the running of the game.

The main part of the game runs on a screen Display List screen which is largely made up of Graphics 2 lines, with the maze being drawn using a custom character set. Santa is made up of two player missiles, thus giving him two colours. He is moved using a small machine code call stored in #42.

Screen initialisation, the character set and the player missile graphics are done in lines 2000 to 31000 and the data for this starts at line 28000. The screen drawing routines begin at line 2000.

The main routine for the program is on lines 400 to 190, with subroutines for moving Santa at lines 40 to 55. These are put at the beginning of the program to give a little extra speed when it is most needed. Lines 200 to 980 contain the puzzle solving sections.

Once you have typed it in don't forget to save a copy before you run it. There is some machine code used which could crash the computer if mis-typed.

If you have any problems trying it in, don't forget to use Get It Right to help you - or why not download a copy from MicroLink?

A graphic featuring a checkmark icon followed by the text "Get it right!" in a stylized, bold font.

HAVE you ever accidentally wiped out a couple of days work simply because you forgot to back-up your main work disk? Most programmers have — probably it assumed just too much time to go through all that tedious disk swapping involved in a duplicate disk operation.

If you've ever had this problem, Cross-Dive, Program II, is the solution you have been looking for.

It is a disc back-up program that can copy an entire single density disc in just one pass.

To do this you must have a 120000 - or an upgraded 80000 - because the program uses the extra bits of banked memory to store part of the 80k of data from the disc. It will not allow you to duplicate commercial game protected discs.

Once-Over is designed to be easy to use and very fast. The options available to you are displayed on one main menu screen.

Option 1 will read a single density disc from the source drive into the Over-Over buffer. You can monitor the progress of the load by watching the fuel-gauge at the bottom of the screen.

Option 2 saves out all the data in the buffer on to the disc in the destination drive. This operation may be carried out as many times as you

Once-Over

Back-up your discs quickly and easily with RICHARD VANNER's single pass disc duplicator

like if you want to make multiple copies.

Option 3 toggles who verify an and off. If it is selected, the data will be checked back after it has been written to the destination disc. This has the side effect of slowing down the duplication.

Option 4: Bypasses the format disc function. The destination disc will be formatted before any data is written to it.

Option 6 changes the source disk drive number. This option will cycle through drives one to four.

Option # cycles the designation due the number from one to four.

Pressing System Reset will allow you to exit from a read or save operation. The contents of the buffer will remain intact.

Just as the Devil takes no man

8. Then place a formatted disk in drive 1 and run the program. If an error occurs then the data is not correct and you should use Get It Right to track the problem down.

Once the data is correct it will create a new sector disc file called **ONCEROVER.D0J**. This is the Once-Over machine code file. To use it, simply go to the DOS menu and use the **DISAS** load option.

This file is completely self-contained and may be copied onto any of your work discs. You could even rename it as AUTOPHYS and have it run automatically on power-up.

For machine code programmers I have also provided the full assembly listing - Program II - which will create exactly the same object file as the BASIC version.

Program Information

Program 11: Assessment Rating

Utility

CENTRONICS INTERFACE

- Transparent to all s/w
 - no driver programme necessary
- Connect direct to 600 or 800/XL or 130 XE – or to disc drive if fitted

surprising, wrong with the computer? — D. Blashki, Brigham, Welsh, West Midlands.

• The number of letters we get on this one is incredible! We thought that by now everyone had got it sorted out, but as new users come along they all run straight into the same difficulties we all confronted when we started out.

The answer is that you will get 4x4 squares if you go to the Self Test from Basic by typing **ST**. This is because 8k of memory is still taken up by the Basic language itself.

If you hold down the Option key as you switch on Basic will be displayed, and you will be able to get the full 48 squares.

Space Maze messages

DEAR ATARI user, First of all, I wanted to type in your program Space Maze from Atari User's July issue and the 170 of the program kept crashing. I have

ATARI Mailbag

We welcome letters from readers — about your experiences using the Atari micro, about how you would like to pass on to other users ... and about what you would like to see in future issues.

The address to write to is:

Mailbag Editor
Atari User
Europe House
88 Chancery Road
Harrow Green
Stockport SK7 6NY

typed many times to correct this time but nothing works.

Is there a simpler way to do this?

I typed in the program from the August issue, took the Page Block, then saved it and loaded in Save, remembering to move the tape 10 units, waited for the test screen printed Play Record and then returned it.

When the ready sign came on I stopped the cassette and

reloaded it. It doesn't type in CLOAD followed by Return, instead for the first, pressed Play and Return'd it.

The tape began to load but after a few counts the tape stopped and has done so every time I have tried to load it. The error number 728 always appears on the screen.

I have tried saving short programs to my cassette and then loading back into my computer without any suc-

cess at all.

Please can you tell me — are I doing something wrong or is my computer just working unsafely? — D. Persaud, Elstree, Herts.

• When I cleared line 170 of Space Maze and there is no problem with it — Indeed, we can't quite see how an error could be generated at run time either.

Possible your problem may involve around the old Rev. 8 basic line entry bug or a fault in your machine.

Try to let us know more details. "Line 170 keeps crashing" doesn't give us enough to go on. For example, when does it occur, what error message does it give, and also when are the contents of the memory afterwards if the error is an run time?

As to your second query, Error 128 means that the computer can't find the program it was looking for.

If you reinsert the tape toward line 10 on the cassette when you recorded it, did you remember to do the same

YOUR HINTS AND TIPS

NINJA

IN the October issue of *Atari User*, I read a review of the card-based Ninja, by Masters Micro. The reviewer, Bob Chappell couldn't seem to get up a lead. Don't worry Bob, that was what I thought it should be!

My brother found it out by accident. When you put all the keys on the first level, go to the Seal entrance, look at the top of the screen for a short time.

Move right under this and push the joystick up. Ninja will leap up to the next level.

This method applies to moving all other levels at any time. You can also go down levels in the same way.

When you have six keys, keep going up and to the right.

When you reach a room called Grey Wall you should see a passage upwards. If the last slot is in Grey Wall, pull all the keys, pull the slot, pull the chain to the left and enter it again. The hole at the top will

open again.

Next move up the passage. When you enter the room you will see five keys, and the seal is coloured blue.

First off all the keys — easier said than done, though they do appear in pairs. Then grab the last slot and pull down the hole. Keep going down until you reach the first level. The enemies have disappeared.

Fight them off and keep going until you reach your Starting Location (Tart in the Seal). You have now completed Ninja. — Duncan Blaauw, Hemel Hempstead, Herts.

MERCENARY ESCAPE

With reference to your excellent review on Mercenary Escape from *Tug* regarding its sequence of events, I suggest a means of retrieving a craft without losing all the objects you are carrying at the time.

Press **L** to land if you are already in a craft. Drop off the

objection you are carrying by pressing **D**.

Press the control key and **G** to retrieve your ship and **L** to get out of your new ship.

Press **T** to take your objection back out by one. Repeat your task again and you're away.

Not bad eh?

Also, to reach 8000 units per time save use the **C** key after pressing **O** while in your craft. Keep pressing this key until you reach the desired speed.

Different crafts can obtain different speeds — The Duration Bar can achieve 8000 when it is airborne. — Michael O'Connor, Dublin.

MINDSHADOW

In *Mindshadow* from Activision, in order to quit the island, enter **H**—**ENTER AUT**—**GET STREAM**—**S**—**B**—**GET STREAM**—**B**—**GET HOME**—**W**—**M**—**S**—**B**—**DROP ALL**—**GET VINE**—**DR VINE ON ROCK**—**DOWN**—**R**—**END**—**GET MAP**

—**READ MAP**—**QUIT ROCK**—**I**—**GP**—**GET ALL**—**W**—**M**—**N**—**N**—**E**—**N**—**E**—**S**—**S**—**E**—**GET BOYFRIEND**—**W**—**E**—**N**—**M**—**W**—**S**—**W**—**E**—**S**—**E**—**PUT STICK**—**WITH ROCK**—**GIVE**—**END**.

However, I can feel like a genius on the boat. I know that I have to set the chain on the anchor in order to anchor the ship.

Someone told me to go to the kitchen and get the meat chopper in that job. But the order won't let me pass in the multi-gate. Please, can anyone help me to escape? — Alan Gaynor, Paisley.

ONE MAN AND HIS DROID

DEAR *Atari User*, I'm the One Man and his Droid owner once again, but I have a problem.

If all the droids are captured in the correct order, as well as previous, at time **SETALL** is activated.

At the start of the game the

before trying to load it back in again?

If you can't get the OS/400 version back in at all, why not try the version you LISTED for use with the disk?!

If the checksum message is used in correctly, you can re-load it with ENTER 'C', and then you can try CLOADing it again.

If you still can't get anything to CLOAD properly the problem may lie with your equipment.

Take both the computer and the recorder back to your dealer for testing, as the fault could be with either - though it is more likely to be the recorder.

Translator disc

I WISH TO buy a translator. Could you please advise me where to obtain one? — Assistant Librarian, Newton Mearns, Glasgow.

• You can purchase a trans-

lator disc, which is what we think you mean, from any American mail-order company. Typically they will just charge you for the blank disc and postage, plus a nominal copying fee.

Elusive sprites

I HAVE recently acquired an Amstrad 2000, and am experiencing the rather elusive Amstrad sprite! I have also bought the Amstrad 32 handbook.

Although this is rather informative it does not tell you how to create multi-coloured sprites.

Also could you advise some books which will teach me machine code programming on the ACP? — Stephen Barron, Crookham, Co. Durham.

• Firstly, the Amstrad doesn't have multi-coloured sprites, so that explains why you are having problems generating them.

You can, of course, use two

or more sprites and move them about together, which gives the same end result. See Stephen Williamson's recent series on Player/Missile One price for more details.

If you want to start learning machine code try a book called Machine Language for Beginners from Computer Books which will take you through the fundamentals in fairly easy stages.

You should also consider buying a memory map - such as Mapping the Amstrad from the same publisher.

All systems are go...

I'VE been reading Amstrad User for quite a while and I've noticed an advert for the Z80 Systems' "Keytop Sampling System".

Recently I've noticed that it isn't in any news. Is this system still on the market or is it very interesting? I'd be very grateful if you could reply.

John - L. Hawker, Middleborough, Cleveland. • Z80 Systems is alive and well, and still supply the product you are interested in. If you drop them a line they will send you more information.

Waiting for the chop

I HAVE just put a question to Amstrad User to the people at System Three Software. For over a year now we have been seeing adverts for International Karate on the Amstrad 46 range.

But will we wait, having written to System Three and returning no reply, I am hoping you will be able to find out for us all if the game exists at all? — Karen Joyce, Shirebrook, South Yorks.

• System Three Software say that the Amstrad version of International Karate will be in the shops by the time you read this.

There is 2000 seconds. If however all the levels are completed in 2000 seconds, a time bonus of about 2000 seconds is issued.

But the total of 2000 - it does not seem to recognise 20000. So open as the total has run out, it does not carry on from 2000, it just runs out.

This is most annoying, and a good score cannot easily be obtained. — Mrs D.P. Bannington, Stratford, London.

you haven't already realised, pressing Start and then Select will allow you to start on different levels.

Dragon-killer 1 (US Gold) After several hours playing on the Super level, and you have swapped your cards, if you have "I stay", do not wait until the time this screen that the last a bad hand.

So if you take £25, the chances are that you will chop and you will win the money in the end.

Quidditch (MAD) If your score decreases, get the bottle of liquid from the root, give it to Flock the Dragon and then take it back to increase your strength.

To do the control box in the sky, get the Amulet from Doctor Whiffen and give it to Dr. S. Samsam. Play to the left by using Samsam's oil-jars, and then he will help you using the sword of command and the scroll of the control box. Then you can use the Command and ground box. The key and red

hanging can both be used for this.

Mercuryman (Wingspan) There is a Player Control card in the air; its location is #43937 altitude #8000. When we press the power floor you can find a key.

The Gladiators (Lucasfilm Games/Activision) To finish this level you need the red jewel and you can kill the dragon with red swords.

To finish the second level you need the green jewel and you can kill the dragon with yellow swords.

Level 3: Blue jewel, green diamond; **Level 4:** red and green jewel, blue sword; **Level 5:** blue and green jewel, purple sword; **Level 6:** blue and red jewel, blue sword.

As you find yourself running out of energy when fighting the dragon keep hitting the spacebar quickly to collect all the swords the dragon shoot at you.

Keep up the great magazine - I look forward to anticipation

to the next issue! — Mark Shephard, Putney, London.

CHIMERA

SOME time ago Chimaera First you had a password. You can eliminate certain entries with this by going up to them and pressing fire.

Eliminate all entries, then get the last and go to a blue room and press fire. Then you will need bread.

Go to a master and press fire.

You need to follow the same procedure as with the selected floors.

Destroy the first master in a level. Now you can open the door. You also have to find a pillar.

Some passwords for Other Floors - type them in as you begin the game.

Level 8: Frost
Level 9: Frost
Level 10: Frost
Level 11: Frost

What's needed: Password on Whiteboard - E. Mitchell.

SIX OF THE BEST

HERE are some tips for short games. I hope that your readers find them useful!

Dragon (Vividsoft) Having trouble getting past a level 45 screen as you appear on screen, when the recorder until the present starts blushing. After the count-down, the player will move on and you will come to the next level.

Blackout (Midlandsoft) V

interested in seeing some digitised pictures etc, then just send a dozen or so colour and return postage and I will post some pictures on there!

If you are interested, write to me at: Commodore, Lyndell Drive, Cranbrook, East Sussex TN2 7PS or phone 0892 636666 and ask for Debbie. Hope this will help some people. — Stephen Bentley, East Sussex.

Colour TV resolution

I WOULD be most grateful if you could answer the following question, the first being the most important, the second optional:

I am on the verge of buying a £2500 TV. I do not wish to buy a monitor — is there a marked loss in resolution when using the BTU with a colour TV? (Mike Morris)

The latest BTUs are obviously in a class of their own and prospective buyers should realize that they really are getting "power without the price".

However, software for the ST is not cheap and not so many years ago all machines were within the realms of a similar situation.

Little changes were demanded in the early days because software was expensive and scarce and a computer offering more than its basic rules had to struggle to break water.

Is it not possible that systems ST software prices will have a similar effect and Commodore itself is this going to lead to piracy just like it did in the early days of the Amiga?

At present, unless what a computer offering as much as the ST's should be addressed to their possibilities when only a few years ago Amiga and Amstrad users were sharing their dreams the dark way.

Are these prices justified and do you think they will improve?

THANKS for a great advanced publication. — Bill Mithip, BIFPO 1515, London.

You will find that the STU BTU can be used in both low

DIY modems are out

I AM thinking of building a modem for my STU, as I have had an considerable amount of experience in building various projects. I don't consider this to be too difficult.

However, it is legal for me to remove plug-in boards from using my new modems, as is there some kind of law that I need to obtain?

If so could you please tell me where I can get one. Also what kind of interface do I need and how much will it cost and is it possible to build one?

Finally I would like to thank you for your excellent series on Home Little Computer, not to mention the master control disc.

After building it I decided to fit it up for a few tasks like making me up in the morning by switching on the light, and

the coffee percolator for a nice hot coffee.

However I decide to never release. Making the self timer, the coffee machine, tramping around the room giving off a blue cloud of boiling steam which turns the room into a sauna and myself into a sweatbox for hours.

Anyway I seem to have got over all these minor teething problems by updating my software. Thanks for a great mag, and keep up the good work. — Simon Rees, Bishop Vesey, Warwickshire.

THE question of home built modems is a tricky one. You may feel confident in building one, but British Telecom will certainly not regard you as a qualified telephone engineer.

For this reason, no home-built modems lists — such as the Modem one — are ever likely to be approved and are hence illegal to use. You can easily connect one to your phone, but not legally.

If BT finds out, it may well cut you off. That said, there are lots of people who do such silly and take the risk.

To connect any modem to the computer you will require an RS232C interface such as the Atari BTU and the relevant software.

If you feel confident at machine code programming, you could try writing your own RS232C software to work via the Invader port.

Be aware though — you might find that the cables the phone to jacks around the room like your coffee machine did!

and medium resolution in a colour TV, but that medium resolution test will be very hard to read and the labels below the line icons almost impossible.

However, if you can connect it via the RGB port you will notice a distinct improvement, but not to the extent that you would with a good colour monitor.

Missing top games

I WOULD like to know why Amiga is bringing out re-release games like Fantasy and Shoots and Ladders for every make of computer except the Amiga itself.

My Amiga users are supporting Amiga by buying its computers and software, only to find the better new games are only available for other machines.

Why are we getting a new disk? Why should we buy the software — if we can get it — when Amiga is lacking Amiga users and so on.

There is no wonder people here in England, if I don't copy

stepped' buying computers and software where would Amiga be then? — Jim Atwell, Hull.

Back to the beginning

AMIGA just purchased an Atari STU, just then Discos for my children.

While we can run the game tapes, there's so far as we can go, having tried unsuccessfully to program games from a game book, I feel we need to understand what we are doing from the beginning.

Can you tell me whether there are any publications which are ideal for the beginner with no computer knowledge at all? Also, any books of games and so on to start us.

While you have games at £2.99 in your magazine, the only stocking I have found is Books with a limited range starting at £10.99.

Any information you can give will be very greatly received and hopefully after my basic test I have made a working situation with this

purchase. — Mrs. L.C. Daykin, Pease, Dorset.

If you don't find a local retailer who has the games you want, why not try looking through the pages of Atari User for a mail order company which advertises such items?

You will find most of them offer a speedy and efficient service, and a far larger range than most local shops can offer.

As for a good book for beginners, you might like to try *Basic Atari Basic* or the 135 pg Handbook — again available from most mail order dealers.

Memory map

I WOULD like to know where I could get a memory map for the Atari STU, and how much it would cost. — Guyeney Pappas, Middlesex, Bucks.

The book you require is called *Mapping the Atari STU*, which is published by Computer Books at £16.95.

You could order it from your local bookshop, or get a copy from Software Express, Computer or one of the other mail order dealers.

Books and bookmen

BUYING and selling rare and out-of-print books isn't as fusty a business as it may sound — even for a firm founded when Robert Peel was prime minister.

Antiquarian bookseller Whiston & Wesley has been trading since 1843, but is going up-to-date when it comes to communications thanks to MicroLink.

Speed is important in locating rare publications, then buying and selling them at the right price.

And as 60 per cent of the firm's business involves dealing with people in countries all over the world, MicroLink's files and other messaging services are proving invaluable.

"Although our specialism is natural history, we also sell in search for rare books other people are looking for", says director Tony Seaton, a member of the family which has been running Whiston & Wesley since the 1930s.

"And where great distances are involved, MicroLink is where the fastest and most economical means of doing the job."

"Our clients are universities, museums and libraries, private collectors and fellow dealers — and most of them are abroad."

"At present most of our business with the United States is done by telephone, but we should soon have an efficient transatlantic mailbox system via MicroLink — and perhaps even a special interest database as well".

Best foot forward

STOCK control procedures at a fast-expanding chain of leather-specialist firms in London used to be rather a haphazard dog.

Now the turnover is more like a sprint — thanks to MicroLink.

Cobra Sports Shoe Shops has blossomed from an eight-store chain in as many years, selling to top international athletes as well as supermarket buyers.

It all adds up to a

mountain of shoe leather — or rather soles and rubber.

Before MicroLink, daily stock reports were written by hand and the sheets had to be sent postbox relayed to the firm's head office, sometimes four or five days later.

Now the information from each shop goes directly every night onto Cobra's MicroLink mailbox for retrieval next morning and processing on the firm's IBM computer. Up-to-the-minute

stock control has been achieved without great expense — instead of a macro each store uses a Point Of Sale.

"This gives us simple one-keyed operations that are easy for the staff to pick up," says Cobra systems manager Sami Brown.

And I've successfully written an automatic messaging procedure in QPL, an IBM Pascal which speeds up the process even more".

Link grows

MICROLINK subscribers can now communicate directly with over 30 countries through the world's biggest electronic mail and messaging network, Datavox.

Italy and Japan have joined the system, bringing to 14 the number of countries offering this global service.

More free software

MICROLINK's telephone library is being recognised and considerably extended.

The programs run on the type of computer — BBC Micro, Apple, Electron, Amstrad and Amiga.

There are now nearly 150 disk programs in the MICROLINK telephone library and this number will be substantially increased during the next few months.

Going with a bang

HAVING survived his childhood hobby of making fireworks — "somewhat luckily", he says — Jon Culshaw went on to other things.

But he never lost his fascination for coloured explosions and now, with a little help from MicroLink, he's creating them all over the country.

As boss of Fantastic Fireworks, Jon was responsible for something like 80,000 "bangs" around Britain this November 5th.

For the past two years Jon has been selling fireworks imported from places like Germany, Spain — and even China where pyrotechnics originated.

He keeps in touch with his suppliers via MicroLink's international and national electronic mail to publicise his services.

These include packaged displays costing from £10 for a family bonfire party to £2,000 for, say, a town's Royal Wedding celebrations.

He found that sending

information via MicroLink is the most effective method of getting publicity for my company in the media", says Jon.

"My displays have already been featured on Saturday Superstore and Paddy Hill in this as a result".

Fly me...

THE Official Airline database available on MicroLink includes information about nearly 20,000 hotels as well as flight and fare details for more than 750 airlines.

The coverage spans 11,000 towns and cities in North America, more than 8,000 in Europe and more than 2,500 in the Far East and Pacific area.

Details displayed include the full general address, telephone and telex numbers, and the range of rates, plus an official classification in most cases.

Another approach is to establish pilot programs on a limited-offense program or focus and expand as it works and builds momentum.

Local governments can also consider expanding their existing programs to include more offenses, such as graffiti, disorderly conduct, littering, trespassing, noise, curfew laws and other related offenses. This approach may be more effective than creating a new entity if the expansion of existing enforcement programs is successful.

It is important to remember that many communities are facing difficult financial times. Therefore, it is important to keep costs low. Many communities have found managers, consultants, auditors, and other professionals willing to work on a fee-for-service basis.

Finally, it is important to realize that most cities will not have the resources available to start a program from scratch. The program can begin with a few offenses, such as graffiti, and expand over time as resources allow. It is important to remember that the first few offenses will be the most difficult to manage and control.

KEYBOARD DEFINER

from P. VAN GILST

THIS five-lineer from a reader in Holland not only lets you modify the keyboard definition table but also adds five useful edit functions.

Save the program after you have typed it in and run it. Now press the key that you wish to redefine. The program will respond with "Give Character". You may type in the character that you wish to store in this key and the program will do the rest.

For example you could press **Shift+Space** and enter a semi-colon when asked "Give Character". From then every time you press **Shift+Space** a semi-colon will be printed.

```
1. DATA 104,110,114,127,130,133,134,
    ,135,136,137,138,139,140,141,
    142,143,144,145,146,147,148,149,150
  2. DATA 110,111,112,113,114,115,116,117,118
    ,119,120,121,122,123,124,125,126,127,128
  3. DATA 110,111,112,113,114,115,116,117,118
    ,119,120,121,122,123,124,125,126,127,128
  4. DATA 144,145,146,147,148,149,140,141,142
    ,143,144,145,146,147,148,149,140,141,142
  5. DATA 121,122,123,124,125,126,127,128,129
    ,130,131,132,133,134,135,136,137,138,139
  6. DATA 121,122,123,124,125,126,127,128,129
    ,130,131,132,133,134,135,136,137,138,139
```

on the screen.

The program also gives you five bonus editing functions:

Control+A moves the cursor to the upper left of the screen.

Control+B moves the cursor to the lower left of the screen.

Control+C moves the cursor to the beginning of a line.

Control+D moves the cursor to the end of a line.

Control+E turns the keyboard click on and off.

The program will only operate on XL and XE machines and you should press **Reset** before you load and run it.

The keyboard table that you have redefined can also be saved for use later by entering the following:

DOS

L

DKEYDEF.BIN,800,800,800

To reload the table:

DOS

L

DKEYDEF.BIN

The keys will now be redefined as before.

LINE BREAKDOWN

- Contains the data for the program.
- Puts in the data and opens a channel to the keyboard.
- Waits for a key to be pressed.
- Inputs the replacement character.
- Replaces the character in the table.

RIVER from A.P. PICKETT

RIVER is a simple game in which you control a boat using a joystick in port one.

Moving the boat from side to side, you see how far you can get up the ever narrowing river.

LINE BREAKDOWN

- Sets up the variables.
- Puts the boat on the screen and reads the joystick.
- Randomly decides on the width of the river.
- Advances your points.
- Tells you how far you travelled.

JOYSTICK TEST from WILLIAM ANDERSON

JOYSTICKS can be very unreliable and it is often difficult to tell whether the program or joystick is at fault. To find out easily, type-in and run Joystick Test.

LINE BREAKDOWN

- Initialises the screen and asks you which joystick port you wish to test.
- Checks the port number is valid and checks for a key press.
- Reads the description from line 50 for the current value of **STICKPORT**.
- Telmes you if the button is pressed.
- Data statements for descriptions.

DECIMAL TO BINARY CONVERTER FROM A.B.C.D.E

This small loader program sets up a machine code routine which will give you an extra Basic command that converts decimal numbers into binary strings.

For example if you enter the number 2 and call the routine using A\$, then the routine will place "00000010" less A\$.

Type in the program and remember to save it before you attempt to run it. After you run the program, you will be able to use this new command:

X=1.8571781, a=

Here x is a character variable, 124 is the address of the machine code routine, A is the buffer to convert to, and B is the address of the memory which will hold the binary number. For example, to convert 2 into 01000010 binary, you would use:

[View All Products](#)

LAW REPORTS

- 1: Identifies the program.
- 2: Ready and poised in the machine code.
- 3: Prints out all the numbers between 0 and 315 as a demonstration.
- 4: First check of data.
- 5: The remainder of the machine code data.

TOO GOOD FOR THE LIKES OF YOU

Have you noticed how people like to keep a good thing to themselves? Among professionals there has always been a certain reluctance to let others in on their secrets.

For years three million professionals have been happily and productively using **dBASE II** - finding it flexible, expandable and able to adapt to their way of operating. At the same time **dBASE II** has been clubbed ... too powerful ... for small business and serious home users ... not right ... for the beginner.

We are not saying that anyone is deliberately withholding you are saying that any database that is tried and tested, can do your taxes involving, forecast your purchase requirements, analyse your costs, add to or change your reports at will and all this only cost £119 is well worth a second look.

Can anything be "too good"?

Available on Amstrad, Commodore, Amico, Tandy from all good dealers including Books and WHSmiths.

dBASE II from First Software

Please send me more details of **dBASE II**.

|----------------------------------|--------------------------------------|-----|--------------|
| Mercenary | £9.95 (tape) £12.95 (disc) | £15 | up to £9.95 |
| The Second City | £5.95 (tape) £9.95 (disc) | £14 | up to £7.95 |
| Mercenary and The Second City | £15.95 (2 tapes) £22.95 (2 discs) | £18 | up to £16.90 |

Mercenary was a smash hit when it was released last year. Now Novagen have produced a new dataset to load into Mercenary. The Second City is crammed with even greater challenges, and has moved our independent reviewer to describe it as: "A classic game . . . a heady mix of flight simulation, strategy and arcade action using incredibly fast 3D vector graphics".

PLEASE NOTE:

To play The Second City you must also have a copy of Mercenary. Both programs require 48K and work with the Atari 400, 800 and the XL and YE range.

If you already have a subscription which doesn't expire for several months, you can consider buying to take advantage of these special offers.

Your Atari
needs protecting

Protect your 520ST, 1040ST, 130XE or 800XL, with our luxury dust cover made of soft, pliable, clear and water-resistant vinyl, bound with strong cotton and decorated with the magazine's logo.

only
£3.95

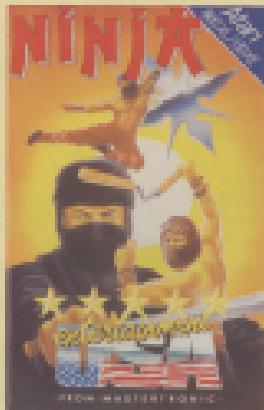

Keep your
collection complete

Bound in chocolate brown pvc and bearing the Atari User logo, this handsome binder will hold a year's supply of the magazines firmly secured in place with metal rods.

only
£3.95

Special offers EXCLUSIVE to Atari User subscribers!

There's action all the way in Ninja!

Use your throwing dagger, flashing Samuri sword and spinning death stars to rescue Princess D-D who is held prisoner in the Palace of Peasli.

"...an unmissable bargain, grasshopper!" says Bob Chappell, software reviewer.

Requires 800XL or 130XE.
Ninja is normally £2.99.

Pay only 99p when you subscribe to Atari User.

THE FORM ON PAGE 53**

Exploit the POWER of your Atari ST to the full, with ...

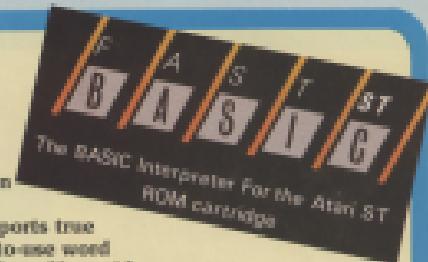

Fast ST Basic is a totally new implementation of Basic for the Atari ST range. Running faster than almost all other languages, it supports true structured programming. And it has an easy-to-use word processor-like editor that makes full use of GEM. Up to 10 separate programs can be held in memory at once - each with its own editing window. There's even a built-in 68000 assembler to let you harness the power of your ST at machine level. And if you order through Atari User you'll save £10!

Look at the speed of Fast Basic compared to other popular Basics, using average PCW benchmarks:

| FAST ST BASIC | 1.9 |
|---------------------|------|
| BPBASIC | 4.8 |
| BBASIC | 14.8 |
| ASTRAD BASIC | 14.7 |
| SINCLAIR BASIC | 15.6 |
| BIN BASIC | 16.8 |
| COMMODORE 128 BASIC | 40.1 |
| SPECTRUM BASIC | 54.9 |

Fast ST Basic is compatible with all versions of the 1040 and 1040 ST.

WHAT YOU GET: A rom cartridge that simply plugs into the side of your ST, a fully detailed 280 page manual, a quick reference card listing all keywords and parameters, and a disc containing many example programs that demonstrate all aspects of Fast Basic from simple loops to full blown GEM programs.

9 useful functions that are ALWAYS available when you are using your Atari ST.

Back-Pack is a versatile disk accessory on rom. It sits in the background while other application programs are running, but can be called up and used at any time. It contains:

Scientific Calculator: Click on the numbers with the mouse or use the numeric keypad to access a large range of scientific functions.

Clock and Alarms: Tell the time with an analogue or digital display. Use the alarm to ring or display a dialogue box.

Diary: Open a page to show a whole day's events. Unique classification feature enables you to search for similar category events.

Notepad: Access up to 31 pages of notes, any of which can be transferred into the application.

Typewriter: Use it to send codes and short messages to the printer while working on other programs.

Printer Buffer: Put aside any amount of the ST's ram as a buffer, allowing long documents to be printed while the computer is still in use.

Address Book: Gives you simple and fast access to names, addresses and other details which can then be used in other programs.

Mini Clock: Place a digital clock anywhere on the desktop.

Mouseflick: Set aside any amount of ram as a Harddisk, to act like an ultra-fast cdc drive. Speeds up any program that normally uses disks.

Computer Company

Back-Pack is compatible with all versions of the 1040 and 1040 ST.

ENJOY THE GOLDEN GREATS THIS

Atari Autumn

Through the good times and the bad U.S. Gold have been Europe's leading publishers of Atari Software. When all other publishers turned their back on this truly great entertainment machine, U.S. Gold kept the releases coming, fast and furious.

Now autumn approaches and those long nights draw near we present a multitude of new exciting titles, to enable all you great games players to play great games on great machines.
